

RADIATION MONITOR PM5000P

RADIATION CONTROL OF PEDESTRIANS, BAGGAGE AND GOODS AT CHECKPOINTS

Purpose

PM5000P is a highly sensitive radiation monitor designed to detect radioactive and nuclear materials providing continuous automatic control of pedestrians and luggage at different check-points.

The Monitor is suitable both for indoor and outdoor installation.

When radioactive materials are detected or when the Current background level threshold is exceeded, audible and visual alarms are triggered and alarm information is transferred to a computer.

If there is no mains power supply, the Monitor will be automatically powered from the built-in accumulator battery. The battery power enables at least 8 hours of RPM operation.

Features

- High sensitivity due to the large volume of detector
- Several monitors can be controlled from one PC
- Storage of event history in non-volatile memory
- Communication with a PC via LAN (Ethernet)
- Advanced data processing algorithms
- Video monitoring system (optional)
- Audible and visual (light) alarms
- Indoor and outdoor installations
- Automatic, 24/7 operation

Application

- Customs check points
- Cross border check points
- Check points in banks, offices, etc
- Check points at nuclear power plants
- Advanced data processing algorithms
- Nuclear waste disposal and storage sites

Monitoring

- Pedestrians
- Luggage

Alarms:

audible and visual (light)

Gamma radiation energy range:

from 20 keV to 3.0 MeV

Ingress protection: IP65

Power supply:

AC 85-264 V, 50/60 Hz or built-in 12 V battery within 8 hours (backup)

Operating conditions

- temperature: from –30 °C to 50 °C
- relative humidity: up to 100 % at 40 °C
- atmospheric pressure: from 84 to 106.7 kPa
